Because of the need for a single common interface and easy communication with C libraries it could not replace the C-based API which had developed around the start of AutoCAD Free Download. By using a standard C++ class library it can communicate with applications built using Visual Basic, Delphi, C#, Java, or VB.NET, or others that support the Microsoft Foundation Class (MFC). This revision will bring major changes in user interface, GUI (Graphical User Interface), and data flow. The new GUI (Graphical User Interface) is the result of collaborative design between AutoCAD users and AutoCAD users to provide faster workflow and interaction with the software. The new data flow allows the users to work with three different approaches: Traditional data flow The data flow is based on traditional setup and connecting data. Advanced data flow The data flow is based on the object and attribute approach. In this model, objects can be easily sent and received between users, and the data is moved among objects with ease.
